Automation Engineer Assignment

Overview

Complete the following automation test. Please make commits as often as possible and please do not make all your changes in one big commit.

Key Goals

As a Customer when I search for Alexa, I want to see if the third option on the second page is available for purchase and can be added to the cart.

Action

- GIVEN the user navigates to www.amazon.com
- AND Searches for "Alexa"
- AND navigates to the second page
- AND selects the third item

Expected Result

- THEN assert that the item would be available for purchase [the user would be able to add it to the cart]

Please use Selenium to write and run your tests. You can use any language of your choise, but we prefer that you use Java. Avoid the usage of "canned tools" such as the Selenium IDE app extension, QTP, etc. We expect you to write tests manually yourself.
